What's inside

Most social media chaos comes from ideas, drafts, designs, captions and results living in five different places. This dashboard puts them in one, and gives you a weekly routine to run it.

Content Calendar

Every post with its hook, copy, caption, CTA, hashtags, design link, schedule and results. Six built-in views.

Idea Bank

Capture ideas the moment they show up. Sort by pillar, source and priority, then promote the best ones.

Campaigns & Key Dates

Holidays, sales and launches on a timeline, with every supporting post linked.

Monthly Performance

One row per month with auto-calculated engagement rate and a 5-question review.

Brand Hub

Positioning, voice, colors, fonts, asset links and content pillars on one page you can share.

Content Playbook

20 hook formulas, caption template, CTA bank, hashtag sets, repurposing workflow, QA checklist and benchmarks.

How it fits together

Brand Hub

keeps every post on-brand

Content Playbook

speeds up writing

Campaigns

tells you what to promote

Idea Bank

Capture everything, shortlist weekly

Calendar

Date it, write it, design it, QA it

Publish

Schedule and go live

Results

Log metrics 7 days later

Monthly review

Keep what works, drop what doesn't

↻ What you learn in the monthly review becomes next month's ideas.

Before you start: you need a free Notion account. Everything in this template works on Notion's free plan, on desktop, web and mobile.

Get the template into your Notion

You'll make your own private copy. Nobody else, including us, can see what you put in it.

1 Log in to Notion

Open notion.com on desktop or web and sign in (or create a free account).

2 Open your template link

Click the template link in your purchase email. The template opens as a page in your browser.

3 Click "Duplicate"

It's in the top-right corner of the page. If you're asked to pick a workspace, choose the one you want to work in.

4 Find it in your sidebar

The template appears under *Private* in your left sidebar as ✨ **Social Media Command Center**. Right-click it and choose **Add to Favorites** so it's always one click away.

5 Open 🚀 Start Here

It's the first quick link on the dashboard and has the setup checklist from the next page.

Managing social for clients? Duplicate the template once per client. Each copy is completely separate, so data never mixes and you can share a client's copy with them without exposing anyone else's.

Getting around the dashboard

SECTION	WHAT IT'S FOR
Top row	Quick links to Start Here, Brand Hub and Content Playbook, plus this month's focus and your shot list
 Plan & create	The Content Calendar (your main workspace), Idea Bank and Campaigns
 Measure & improve	Monthly Performance with your month-end review
 Tools	Your Tool Stack: what you use, what it costs, what it's for

Each database has **view tabs** along its top edge (Pipeline, Calendar, Results...). A view is just a different lens on the same posts.

Make it yours

Do this once. After that, you only need the weekly rhythm on page 6.

1 Fill in the Brand Hub

Replace every [bracketed] placeholder: positioning, audience, voice, words to use and avoid, colors (with HEX codes), fonts and asset links. This is the page you'll share with designers, VAs or clients.

2 Rename your 5 content pillars

The template ships with Educate, Show How, Behind the Scenes, Recommend and Engage. To rename: open the Content Calendar, click the **Pillar** column header → **Edit property** → click an option to rename it. Do the same in the Idea Bank so the names match, then update the pillar table in the Brand Hub.

3 Trim the Platforms list

Click the **Platforms** column header → Edit property, and delete the platforms you don't use.

4 Add your hashtag sets and CTAs

In the Content Playbook, replace the hashtag placeholders and add CTAs that point to your offer.

5 Load the next 90 days of key dates

Add holidays, sale events (11.11, Black Friday, 12.12), launches and awareness days to Campaigns & Key Dates.

6 Set up your Tool Stack

Keep the tools you use, delete the rest, and add costs so you know what social is costing you each month.

7 Delete the EXAMPLE rows

Each database has sample entries marked EXAMPLE so you can see how a finished post looks. Once you've looked through them, select them and press Delete.

8 Brain-dump 20 ideas

Open the Idea Bank and add 20 ideas as fast as you can. Don't filter. You'll sort them on Monday.

Keep these names the same unless you know your way around Notion: Status, Pillar, Publish Date, Reach, Likes, Comments, Saves and Shares. The views, formulas and chart use them. Renaming them is fine; Notion updates references automatically. Deleting them is what breaks things.

The Content Calendar

One row is one post. Open any row to see every field, or work from the views below.

Views

VIEW	USE IT TO
All Posts	See everything in a table, sorted by publish date
Pipeline	Your daily home. A board grouped by status. Drag cards right as work moves. Filter by pillar or platform from the bar at the top.
Calendar	See your month at a glance and spot gaps. Drag a post to a new day to reschedule it.
Needs Attention	Only posts that are blocked on assets or waiting for review
Results	Published posts with all metrics and engagement rate, newest first
Pillar Mix	A donut chart of posts per pillar, to check your content balance

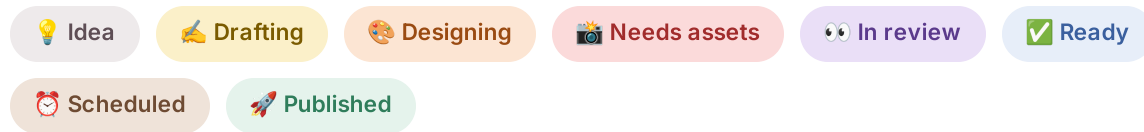

Fields

FIELD	WHAT TO PUT THERE
Post	A short working title you'll recognise
Status · Publish Date	Where it is in the pipeline, and when it goes live
Pillar · Format · Platforms	Which pillar it serves, the format (carousel, Reel...) and where it's going
Campaign	Link it to a campaign or key date, if it supports one
Hook	The first line or on-screen text. Pull a formula from the Playbook.
Slide / Script Copy	Slide-by-slide text or the video script
Caption · CTA · Hashtags	Final caption, the one ask, and the hashtag set you'll paste
Visual Brief	What the graphic should look like, and any photo you need to shoot
Design Link · Assets	Your Canva/CapCut link, or upload the final files
QA Passed	Tick it after running the Pre-Publish QA checklist
Live Post Link	The URL once it's published
Reach → New Followers	Results, logged 7 days after posting
Engagements · Engagement Rate	Calculated for you. Don't type in these.

YOUR ROUTINE

The pipeline & weekly rhythm

Every post moves left to right through eight statuses. A few focused blocks a week keep it moving.

Needs assets and **In review** are "blocked" statuses. Anything in them shows up in the *Needs Attention* view so it doesn't get forgotten.

The weekly rhythm (about 4½ hours a week)

WHEN	WHAT TO DO
Monday · 30 min	Plan. Shortlist ideas in the Idea Bank. Add the best ones to the calendar as Idea with a date, pillar and format. Check Campaigns for anything coming up.
Tuesday · 90 min	Write. Batch hooks, slide copy and captions using the Playbook. Move posts to Drafting, then Designing.
Wednesday · 90 min	Design. Create graphics and videos, paste the Design Link. Anything missing a photo goes to Needs assets and onto your shot list.
Thursday · 30 min	QA and schedule. Run the QA checklist, tick QA Passed, load into your scheduler and move to Scheduled.
Friday · 15 min	Measure. For posts that went live 7 days ago, log Reach, Likes, Comments, Saves, Shares, Link Clicks and New Followers.
Month end · 30 min	Review. Fill in the month in Monthly Performance and answer the five review questions.

Short on time? Merge Tuesday–Thursday into one 3-hour batch day. The pipeline still works; you'll just move cards further in one sitting.

Writing a post with the Playbook

Open the Content Playbook side by side with your post. Here's the five-minute path from blank page to ready-to-design.

1 Pick a hook formula

The Hook Bank has 20 formulas in five groups: curiosity, mistakes, results, how-to and POV. Fill in the brackets and write 3 versions. Keep the best one in the *Hook* field.

2 Write the body

Carousels: one idea per slide, 6–10 slides, big text. Reels: hook on screen in the first 2 seconds, then the value, then the CTA. Put it in *Slide / Script Copy*.

3 Build the caption

Use the six-part structure: Hook → Context → Value → Proof → CTA → Hashtags. There's a copy-paste template in the Playbook.

4 Choose exactly one CTA

Match it to the goal. Want reach? Ask for shares. Want saves? Ask for saves. Want leads? Use a comment keyword.

5 Paste the hashtag set

Use the core set plus the right topic set. Don't write hashtags from scratch every time.

6 Write the Visual Brief

One or two lines your future self (or a designer) can work from, including any photo to shoot.

Repurpose your winners

When a post does well, run the **Repurposing workflow** in the Playbook: one strong idea becomes 3 short videos, 1 carousel, 2 quote graphics, a text post and a story poll. Add each piece to the Idea Bank with Source set to *Repurpose long-form*.

Run QA before anything gets scheduled

The 11-point **Pre-Publish QA checklist** catches the mistakes that cost reach: weak hook, two CTAs, missing captions on video, unreadable cover, broken links. Run it, then tick *QA Passed*.

✦ **Pro tip:** paste the Brand Hub's tone of voice and a few of your best captions into your AI writing tool before asking it for drafts. The output will sound much more like you.

Tracking results

Ten minutes of logging a week tells you exactly what to make more of.

Per post (every Friday)

Open the **Results** view. For each post published about 7 days ago, copy these numbers from the platform's insights: Reach, Likes, Comments, Saves, Shares, Link Clicks and New Followers. If a post went to several platforms, add them together or log your main platform only. Just be consistent.

The dashboard calculates the rest:

$$\text{Engagements} = \text{Likes} + \text{Comments} + \text{Saves} + \text{Shares}$$

$$\text{Engagement Rate (\%)} = \text{Engagements} \div \text{Reach} \times 100$$

Sort the Results view by Engagement Rate or Saves to see your best posts instantly.

Per month (last working day)

1 Fill in the month's row

In Monthly Performance, add total posts, reach, engagements, saves, shares, clicks, new followers, total followers and leads/DMs. Engagement rate is calculated.

2 Link your top post

Use the *Top Post* field to link the month's best performer from the calendar.

3 Answer the five review questions

Open the month's row. Each one has the questions ready: what worked, which pillar lagged, what the audience asked for, what to stop, and the one experiment for next month.

4 Check the Pillar Mix chart

If one pillar is way over or under your target %, adjust next month's plan.

Benchmarks

METRIC	HEALTHY	GREAT
Engagement rate (by reach)	3–5%	6%+
Saves per 1,000 reach	10–20	30+
Shares per 1,000 reach	5–10	15+
Monthly follower growth	3–5%	10%+

Benchmarks vary by niche and account size. Your own month-over-month trend matters most.

Ideas, campaigns & tools

Idea Bank

Add ideas the moment you have them, even from your phone. Tag the **Source** (comment, client question, trend...) so you learn where your best ideas come from. On Monday, move the best to *Shortlisted*, add them to the calendar, then mark them *Moved to calendar*.

Campaigns & Key Dates

Add each campaign with a date range, goal and offer. The **Timeline** view shows what's coming. When you create a post that supports a campaign, set its *Campaign* field; open the campaign to see all linked posts.

Tool Stack

Track every tool, what plan you're on and what it costs. Store which email an account is under, **never passwords**. Review it quarterly and cancel what you don't use.

Shot list

The yellow box at the top of the dashboard is your weekly shot list. When a post is *Needs assets*, add the photo or clip here so you can shoot everything in one session.

Power-user tips

- **Mobile capture:** add the Idea Bank to Favorites in the Notion app and log ideas in seconds.
- **Hide fields you don't use:** open any post → ••• → *Customize page* and hide empty or unused properties.
- **Post templates:** in the Content Calendar, click the arrow next to *New* → *New template* to save a pre-filled post (e.g. "Weekly carousel") with your usual hashtags and CTA.
- **Client approvals:** share a client's copy with them as "Can comment". They comment on the post, you move it out of 🙄 In review.
- **Automate logging:** with Make or Zapier, you can create a calendar row automatically when a post is published in your scheduler.

FAQ & troubleshooting

Do I need a paid Notion plan?

No. Everything works on the free plan. Notion's free plan has a file-upload size limit, so for big videos paste a Drive or Canva link instead of uploading.

I deleted a view, property or row by accident.

Press Ctrl/Cmd + Z straight away. For deleted pages, check *Trash* in the sidebar. You can also re-duplicate the original template any time from your link.

The Engagement Rate shows 0.

It needs a Reach number above zero. Fill in Reach and it'll calculate.

A post isn't showing on the Calendar view.

It needs a Publish Date. Undated posts still appear in Pipeline and All Posts.

The Pillar Mix chart looks wrong after I renamed pillars.

Make sure you renamed the existing options rather than creating new ones. Old posts keep the old option until you change them.

Can I use this for more than one brand or client?

Yes. Duplicate the template once per brand. Your licence covers your own brands and the clients you manage.

Need help? Reply to your purchase email and we'll get back to you within 2 business days.

Licence: for personal use and for managing your own clients' accounts. Please don't resell, share or redistribute the template or this guide.

Now go make something worth saving. ✦
